

post-transcriptional regulation of gene expression  
organonitrogen compound biosynthetic process  
epidermis development mRNA processing  
regulation of mRNA processing  
pattern specification process RNA processing  
mesenchyme development animal organ development  
regulation of mRNA metabolic process epithelium development  
positive regulation of gene expression  
regulation of RNA splicing  
tissue development RNA splicing  
skin development regionalization  
carbohydrate derivative metabolic process  
epithelial cell differentiation
